DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimer filed on 1 June 2004 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent No. 6,313,046 B1 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

2. Claims 105, 111-114, and 130-132 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Rostoker teaches each of the features of the claimed invention including especially the vaporization of carbon in an already porous insulative matrix to form larger pores in the insulative matrix, which provides the benefit of a low dielectric constant insulative material leading to reduced RC delay. Rostoker does **not** teach that the insulative matrix is made from silicon carbide (SiC_x). While Herndon teaches SiC is a known matrix for insulating wires, the combination of Rostoker with Herndon is considered, at best, obvious to try. The rationale is as follows: one of ordinary skill may not have a reasonable expectation of success since the vaporization treatment (e.g. oxidative) used to remove the carbon may damage the silicon carbide layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
